Q1 Did you receive adequate notice that the reproductive health and sexuality education classes were going to be taught to your child?

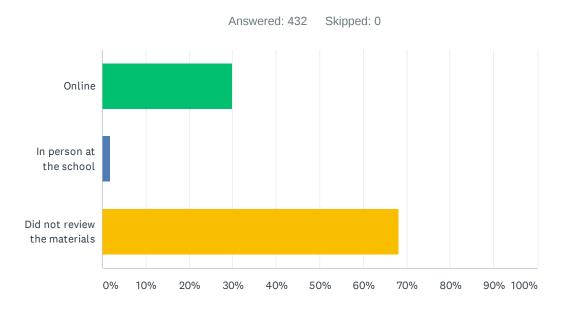

ANSWER CHOICES	RESPONSES	
Yes	82.09%	353
No	17.91%	77
TOTAL		430

Q2 Were you aware that course materials (e.g., instruction manuals, classroom materials and videos) are on the Okemos Public Schools main website? Go to www.okemosk12.net, click on the Academics tab, scroll down and click on Personal Health. User Name: PHASE, Password: OKPHASE2017. Direct link: https://www.okemosk12.net/domain/44

ANSWER CHOICES	RESPONSES	
Yes	55.32%	239
No	44.68%	193
TOTAL		432

Q3 Have you reviewed the materials online, in person, or none of the above?

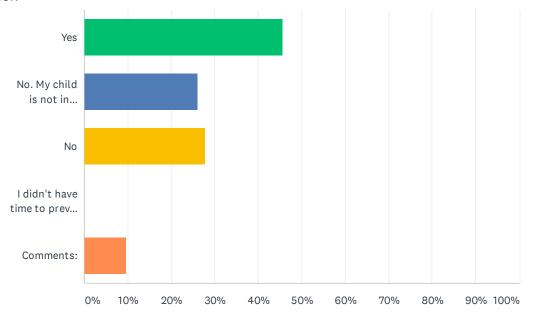

ANSWER CHOICES	RESPONSES	
Online	29.86%	129
In person at the school	1.85%	8
Did not review the materials	68.29%	295
TOTAL		432

Q4 Students in grades 4 through 6 are now able to take reproductive health with students of their same sex (as usual) or in a mixed gender group. Grades 7 and 8 are currently in same-sex classrooms; high school has mixed gender instruction. Our surveys of students in mixed gender group have been very positive. Is a mixed gender sex education classroom something you would consider for your child in grades 4-6?

Q12 One of our goals is to improve parent-child communication about sexuality education and reproductive health. What suggestions do you have that would help us reach that goal?

Answered: 104 Skipped: 328

Q13 We are required by Michigan law to provide instruction about HIV and AIDS at each building level. HIV and AIDS are spread primarily through injection drug use and sexual activity. Our fourth grade curriculum does not provide information about sexual intercourse, which leaves many students wondering what we are talking about. What is your opinion about giving students a brief definition of sexual intercourse in the 4th grade in the context of HIV/AIDS education? Here is the definition for sexual intercourse that the PHASE board and 4th grade teachers agreed upon: For a male and female to make a baby, they join their bodies together in sexual intercourse. During sexual intercourse the male ejaculates. This means that millions of his sperm leave the penis and go into the female's vagina. The sperm then swim into the uterus and fallopian tubes. If this happens around the time the female ovulates and

releases an egg cell, the egg may get fertilized by one of the sperm and she may become pregnant.
